/ Chapter 17.2: Time for the plan

Chapter 17.2: Time for the plan

Project topics are published on Feb. 2nd. Choose the topic soon after that and start thinking about how to implement the project. The project plan is not ready in a moment, and this round is deliberately shorter in order to allow you to start planning early. Note that it is worth taking advantage of the course's exercise groups, especially when considering the technical project plan and the class structure. You are welcome to come and discuss ideas with the course staff.

Now it is also good time to create a Gitlab-repository for your project in accordance with the course project guidelines. In the instructions, you are also asked to add the project assistant to the project information. However, this can be done later when the assistants of all topics are known.

Ask us in Zulip and Exercise groups!

You can discuss and ask questions about the implementation ideas and project interpretation etc. in Zulip. We are also happy to discuss any questions and ideas in the exercise groups.

Graphics and Threads

In some project topics you will need graphics and/or simple parallel programming. These will be covered in the forthcoming lectures/material before the technical plan deadline.

Feedback

No feedback is needed for this short section.
