Each topic has a nominated project assistant. The assistants will later help students who have chosen the topic in the following types of questions.

- requirements for project work, ambiguities in the assignment
- permission to undertake any changes to the topic
- criteria for evaluation (see general project evaluation criteria)
- questions about project schedule and demos

The topic responsible assistant is also, as a rule, the person who follows the project demo presentations and evaluates the plan and the final project submission and demo (changes to this general approach may be possible for practical reasons in some cases).

Tasks of project assistant and exercise groups during the project

Exercise sessions continue throughout the project. The sessions in period IV are on Mondays (14-16) and Thursdays (12-14) in Zoom. Questions about implementation issues and Scala belong to Exercise sessions / Zulip.

Project Assistant provides guidance and follows your work during the project in version control. He/she can point out something about your programming but he/she is not a program repair service for which you can send any questions about individual programming problems or who finds or corrects errors in student's programs. You should contact the assistant, if you have questions about the topic and its interpretation. Note that most assistants attend weekly exercise sessions during the project, where you can get guidance from your particular assistant.

In general, questions like "What kind of class structure should I do for this program? / What's wrong with my code and it does not work?" type questions should be sent to Zulip or asked in exercise groups.

In brief

It is advisable to ask programming questions in exercise groups or in Zulip.

Questions about interpreting a project topic can be asked from an assistant or in Zulip

Topics and Assistants

Your project will be monitored and supervised by an assistant according to the table below. Guidance is given mainly in English, because in spring 2022 most assistants do not speak Finnish.

Assistant version.aalto.fi IDs

At the beginning of the project, an own version.aalto.fi repository will be created and the project assistant is given access to read the code, and to create so-called. issues (Reporter level rights). See page GitLab for instructions.

assistant	version.aalto.fi -user
Aleksi Hannula	hannula7
Khoa Lai	laik1
Tuan Nguyen	nguyent84
Long Nguyen	nguyenl22
Atreya Ray	raya1
Otto Seppälä	oseppala
Taige Wang	wangt6

Project plan demos

Check from the topic list your assistant and choose the demo time from the links below. If there are two names listed for a project topic, there is a range of student numbers listed for each assistant.

Book a demo time lead to Doodle, where you can choose **one** demo time.

In the doodle name, type your last name and first letter of your First Name *e.g. L. Malmi*, so that the assistant knows whose plan to deal with.

Each assistant has a separate zoom session (listed below)
